Public

I'm still in shock. Last night at dinner, I discovered that my bank account was hacked and they stole \$800,000!!! Then as I entered my hotel room a gang of men had ambushed me and robbed me and took my \$2.4million diamond ring. I'm so devastated, I don't know how they could have known my location!

EVIDENCE #4

CYBERCRIMES POLICE DEPARTMENT

Official Report

REPORTED BY: Kyle KennerREPORTING OFFICER: Detective Henri**Incident 1: Cyberattack incurring losses of \$800,000**

Description: Ms. Kenner discovered her bank account had been hacked. Hackers stole a sum of \$800,000 from Ms. Kenner's account.

Analysis: Ms. Kenner had connected to a public wifi network while dining at Cafe de Eiffel Tower around 11am. The suspect connected to the same public network and managed to intercept and access Ms. Kenner's personal device.

Incident 2: Robbery of \$2.4million diamond ring

Description: Ms. Kenner was robbed at her hotel in Paris, Château de Luxe, around 9pm. The thieves escaped with her diamond ring.

Analysis: The thieves had been following Ms. Kenner's social media posts and figured out which hotel she was staying due to her geotagging and oversharing.

1. How could Kyle have prevented these crimes from occurring?
2. What could Kyle have done to protect her device from getting hacked on a public wifi network?
3. What behaviours should Kyle change so this doesn't happen again?

**INVESTIGATE****EVIDENCE #5****Global News Daily****Kyle Kenner's Paris Robbery: A Stark Reminder of the Dangers of Oversharing and Geotagging on Social Media**

Kyle Kenner, the famous celebrity and social media influencer, was robbed in her hotel in Paris last night. The thieves escaped with her \$2.4million dollar ring that Kenner had been flaunting on social media earlier that day. The police report also stated that her bank account had been hacked and she lost \$800,000.

Authorities have now confirmed that the suspects were able to follow Kenner's movements around Paris that day through social media. They knew which restaurants she was dining at and which hotel she was staying in.

This serves as a stark reminder of the risks associated with oversharing and geotagging on social media.

As a public figure, Kenner has long been known for sharing her life on social media, from family vacations to fashion choices. While her millions of followers may have enjoyed a glimpse into her glamorous lifestyle, the suspects used it to locate her.

By geotagging her posts and sharing her location with the world, Kenner unwittingly made herself a target. And while no one

deserves to be the victim of a violent crime, the reality is that oversharing and geotagging can make it easier for criminals to track their targets and plan their attacks.

In the wake of the robbery, Kenner has become an advocate for online privacy and security. She has spoken out about the dangers of oversharing and urged her followers to be more mindful of the information they share on social media.

1. How could Kyle protect her privacy while still sharing her experiences with her followers?
2. How can geotagging contribute to the danger of oversharing on social media?

PROJECT WORK

Create a handbook to help people protect their privacy and personal information while using social media platforms.

What should your project outcome look like?

The handbook should have suggestions and rules that emphasise safe online practices and highlight potential risks and dangers associated with oversharing, geotagging, and using public wifi networks.

Instructions and Questions to Consider:

1. What personal information should be kept private and not shared on social media?
List the best practices of online safety and why people should follow them when using social media. For example, you should never give out personal information and share your location.
2. What are the potential risks associated with geotagging and oversharing on social media?
3. How can users adjust their privacy settings to protect their personal information?
4. Develop rules and guidelines to help protect personal information and privacy while using social media.
5. Organise the handbook into sections based on the social media platforms and topics covered.
